inding Prime Numbers with Python this post I'm going to run through a function in Python that can quickly find all the

Prime numbers below a given value. For exa...

O 1 minute read

Coffee & Python

My first project is all about how much I LOVE Pyt so much, here is some code! my_love_fo...

GETTING STARTED WITH YOUR GITHUB PORTFOLIO

IF DONE WELL, A PORTFOLIO OF PROJECTS CAN SHOWCASE YOUR VALUE TO HIRING MANAGERS.

I WANT YOUR PORTFOLIO TO STAND OUT ABOVE THOSE OF OTHER CANDIDATES!

COPYING THE PORTFOLIO REPOSITORY TO YOUR GITHUB

Make sure you are **logged in** to **your** GitHub account (the one where you want the portfolio to exist in)

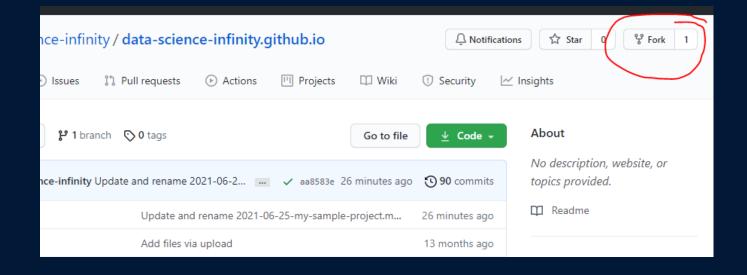

Once you are logged into your account, head to the below URL (right click - and open in new tab)

https://github.com/data-science-infinity/data-science-infinity.github.io

(This is the location of the portfolio on the DSI Github account. We will be copying it over to your account)

To make this copy, when at the DSI Github page (the link above) click **Fork** at the top right

(Clicking Fork will move a copy of this specific repository over to your Github account. You will see a progress screen for several seconds as the copy is made, and then will be taken to your new repo!)

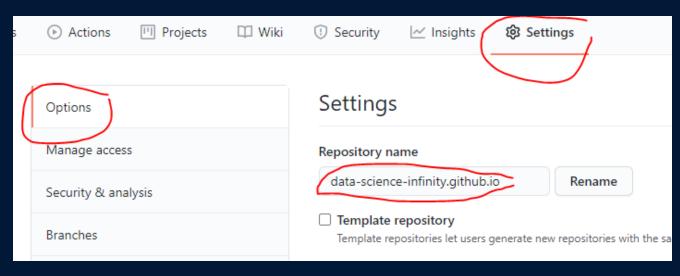

After the Fork is complete, and you have been taken back to your Github account, click into the new repository (which will still be called data-science-infinity.github.io)

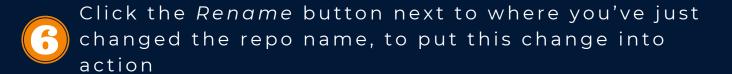

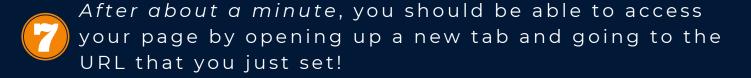

In the *Settings* tab of your repository, make sure you are in *Options* and then rename the repository name to be *your* Github username.

(For example, if your GitHub username was *pythonlover89* then you would change this field from *data-science-infinity.github.io* to instead be *pythonlover89.github.io*)

As an example, the site for Github user *pythonlover89* would be *https://pythonlover89.github.io*

Congratulations - your portfolio should now be up and running!

GOODBYE JOHNNY HOPKINS.

HELLO YOU!

UPLOAD YOUR PROFILE PICTURE

When you first access your portfolio there is a placeholder image called *profile_picture.jpg* (which exists in the *img* folder)

Let's upload YOUR profile picture now!

- Get the best, most professional image of yourself!
- Before adding to your portfolio site, make sure the image is of *square* dimensions (otherwise it will end up squished on the site!)

There are tools on your local machine that can do this, but you can also use a site such as...

https://croppola.com/

- Back in Github, open the *img*/folder that is in the root directory of your portfolio repository
- Click Add files -> Upload files -> Drag your square photo file into this folder
- G COMMIT THIS UPLOAD!

This is all you need to do for now, we will point to this file later on!

UPLOAD YOUR RESUME/CV

When you first access your portfolio there is a placeholder Resume called *resume.docx* (which exists in the *img* folder) purely to showcase that it will be downloaded upon a user clicking the Resume link on the site.

Let's upload your Resume now!

- On your local PC, save your Resume/CV in the file format you want, Word & PDF are most common name your Resume/CV file sensibly the file name you have for it will be the file name a hiring manager or recruiter sees when they download it. A good approach is to simply use your full name, and potentially the month and/or year (to help you keep track of updates you make over time) so something like "Johnny Hopkins Resume 2021"
- Back in Github, open the docs/folder that is in the root directory of your portfolio repository
- Click Add files -> Upload files -> Drag your Resume file into this folder
- COMMIT THIS UPLOAD!

This is all you need to do for now, we will point to this file in the next set of instructions!

UPDATE YOUR PERSONAL DETAILS

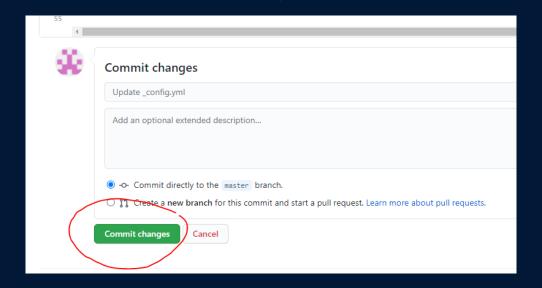

- Click on the <u>config.yml</u> file that exists in the root directory of your portfolio repository. This file controls all of your personal details for the site.
- Click the pencil button to edit the contents of this file
- Under *General Site Settings*, make the following changes:
 - Find "title" and change "Johnny Hopkins" to your name
 - Find "description" and amend this text (keep this around the same length, you want this to be short but impactful – your Resume will be the document to showcase you in more detail)
- Under About Section, make the following changes:
 - Find "location" and update this to your location (don't remove the quotation marks)
 - Find "resume_url" and change this to the location of the Resume file that you uploaded earlier in the instructions (i.e. change /docs/resume.docx to /docs/<your-resume-file-name.pdf> or whatever it was you called it! Remember to include the file type like .pdf or .docx etc)
 - Find "avatar_img" and change this to the location of the profile picture file that you uploaded earlier in the instructions (i.e. change /img/profile_picture.jpg to /img/<your-photo-file-name.jpg> or whatever it was you called it! Remember to include the file type like .jpg or .png etc)

UPDATE YOUR PERSONAL DETAILS

Under Contact Links, make the following changes:

- Find "linkedin" and change this to the URL of your linkedin profile (make sure this is within double quotation marks)
- Find "github" and change this to the URL of your Github profile (make sure this is within double quotation marks)
- MAKE SURE you commit these changes otherwise they will not be saved!

Refresh your site, and take a look at your changes!

Important Note: Remember that updates to the site can take around 30 seconds to take place. Once you've commited your changes you may not see them instantly!

LET'S CREATE A NEW PROJECT

There is one project already in your portfolio, named "Finding Prime Numbers With Python"

This is a simple run-through of the Python mini-project we built together in the *Python Fundamentals* section of DATA SCIENCE INFINITY.

You can keep this one in your portfolio (if you want) but do make sure you understand exactly what is happening with it in case a hiring manager or recruiter asks you about it!

CREATING A NEW PROJECT

To create a new post/project, you need to add a new markdown file in the _posts folder that exists within the root directory of your portfolio repo on Github.

2021-06-25-coffee-and-python.md

For the site to work properly, the naming convention of each project/post is important!

- Each project/post MUST start with the date, in the format YYYY-MM-DD. If this is not included, the project will not show on the site.
- The date used is also what determines the order of projects on your site (newest show at the top)
- At the end of your filename, you must ensure you include .md to create this file as a markdown file.
 Other file types will not display on the site.
- For the name of your post/project within the filename, you can separate words using hyphens, underscores, or spaces - but for consistency, I recommend using hyphens.

CREATING A NEW PROJECT

Now you've named your file, head to the link below to get some example Markdown code for your new project (right click - and open in new tab)

https://drive.google.com/file/d/1xcVZilec9JLIVRy4DekPYpCsoaK4b_wN/view

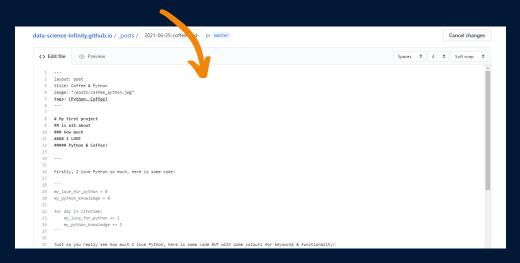

Copy the code from the txt file

Paste the code into the *body* of your new project markdown file

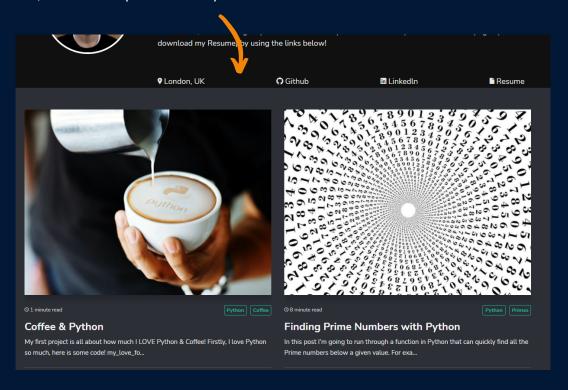

Important! Once you've copied that text into the body of your project **COMMIT the changes!**

CREATING A NEW PROJECT

Refresh your portfolio website to see this new project appear (remember, it can take around 30 seconds to process, so be patient)

Nice work! This is the basis for a project using Markdown!

On the *main page* of your portfolio site, you can see that it has a title, an image, and some useful tags.

If you *click into* your new project you can see:

- Different sized headings
- Horizontal lines
- Normal Text (with italics, and bold)
- Code blocks
- Lists (both unordered, and ordered)
- An image

All these are from the Markdown that you added in!

SOME THINGS TO NOTE ...

The elements we've added in are what you will need to know for the vast majority of projects that you add, but there are plenty of other elements you can add as well!

Two useful links are:

- https://www.markdownguide.org/basic-syntax
- https://github.com/adam-p/markdown-here/wiki/Markdown-Cheatsheet

Take another look at the Markdown code for your example project...

Your portfolio has been created in a dynamic way, and to ensure projects look as they should, we need to always include the following 6 lines at the top of the project...

layout: post

title: Coffee & Python

image: "/posts/coffee_python.jpg"

tags: [Python, Coffee]

For each new project...

- Leave layout: post as is, this does not need to change
- Update the title this is the display name of the project)
- Update the image this points to the image file that is used for the project on the main site (and at the top of the project itself)
- Update the tags users can click these to see other projects with similar tags

Note: The images that you will use are stored in the /img/posts folder in your repo. If you go into that folder, you will see that the coffee_python.jpg image was already there. To add images for future projects, you can just click "Add file" then "Upload files"

FREQUENTLY ASKED QUESTIONS

HOW DO I EDIT A PROJECT?

To edit the contents of a project, simply click on the filename for that project, and then click the pencil icon at the top right. You will need to commit any changes for them to take effect (and wait around 30 seconds for them to be seen on your site)

HOW DO I DELETE A PROJECT?

To delete a project, click on the filename for that project, then click the trashcan icon over to the top right. You will need to commit this delete to actually delete it.

HOW DO I RENAME A PROJECT?

To re-name, or edit the name of a project, simply click on the filename of that project to open it, and then click the pencil icon at the top right (just as you would to edit the contents of the file). The file name should now become available to edit as well. Once changed, make sure you commit the change.

CAN I GET MORE POSTS TO SHOW ON MY SITE'S FRONT PAGE?

By default, your site will display 6 posts/projects per page. If you have more than that a user would need to click a button at the bottom to see more of your work. If you want to show more projects on your site, you can do this.

In the _config.yml file, find "paginate" (you can find this on line 28, under the Github & Linkedin links) and increase this to your desired number. Remember to commit this change, and then wait 30 seconds before refreshing your site - you should now see more projects on the site.

COMMON ISSUES

If you're having issues with a project, it can be good to check the following things...

- Have you commited the changes that you made?
- Has your new project been created as a Markdown file using the .md suffix?
- Has the date (in the format YYYY-MM-DD) been added to the front of your project filename?
- Have you waited 30 seconds for the changes to take place?
